

Profile

Digital and Interaction Designer currently working at Random Studio. Building on my background as a Graphic Designer, I went on to study at ECAL, graduating with an award winning project FULCRUM (Prix Plateforme10).

Experience

Random Studio—Interaction Designer (+Internship)

[2023: Amsterdam, Netherlands]

My work at Random began with an internship and evolved as I was given more responsibility based on my skills. The wide array of projects I participated in gave me the opportunity to apply the skills developed at ECAL. It has also been a great context in which to learn, for example developing prototypes of spatial interactions using tools such as CGI or game engines.

Ranging from research on client briefs, to internal experiments in interaction, I have worked both on creating concepts as well as asset production and development of live projects.

My technical experience allows me to understand and research the implementation of technologies from the early stages of concept development. In the project planning pipeline, my technical foundation greatly benefits in the communication with developers.

Lightspeed—Digital Designer

[2018: Amsterdam, Netherlands]

Having become more and more interested in UX / UI at this stage of my career, I applied to work for Lightspeed whose product is a Point Of Sales Software platform. Working in the marketing team, I got a chance to be close to the clients, active in retail and horeca. I also collaborated with the other in-house designers to bring to life events organized by the company, as well as working on their presence at various conferences in the EMEA region.

SAI—Graphic Designer

[2017: Amsterdam, Netherlands]

During my time at SAI I completed various projects for exciting brands, my highlights being a local vintage bike merchant, an Italian furniture store and even an in store experience for NIKE. Tasks were varied ranging from print to digital design, no two projects demanded the same skill set.

London Metropolitan—Graphic Designer

[2016: London, England]

Whilst completing my last year of studies at the university, I began working part-time with the in-house design team, overseeing and collaborating on the production of visuals for internal events as well as aiding students with artistic direction.

BMP Advertising—Graphic Design Intern

[2012: Bucharest, Romania]

During my time at BMP I got a chance to pick up a wide variety of software skills at a young age, dealing with industry standard software on the daily, I got accustomed to self-learning which eventually sparked my interest for developing more technical abilities. Working mostly for clients in the pharma and transport industries, I got a glimpse of industry practice under the supervision of the agency's seniors.

Education

ECAL

Ecole Cantonale d'Art de Lausanne

[2019—2023: BA Media & Interaction Design]

London Metropolitan

[2016—2017: BA Visual Communication]

University of Salford
